In this bulletin

In this issue, we have updated the list of courses, adding new information on pre-existing and new courses.

On the spot, we have the MOOC by UNED and Tecnatom on Nuclear safety culture, whose date has been fixed for October 1st, 2019.

Then, the Course by FUSENET and Framatome on Regulation and its Application in Nuclear Projects is going to be repeated in September.

In addition, we continue advertising about independent E&T activities in the nuclear field, not belonging to the ANNETTE Project.

We again retrieve the suggestion that, if you apply for support by the ENEN+ project, you should prompt the Course Providers about this request, soon at the time of being contacted.

Please, also read the ENEN+ Mobility Manual for knowing the conditions for applications and avoid rejection.

We had up to now more than 280 applications most of them for multiple courses. However, finalised applications have been less numerous. So, please, keep in touch with ENEN Staff and Course Providers to solve any problem for assuring participation.

Thanks for your interest in our courses!

Course on Experimentation in Josef Underground Facility

A HANDS ON TRAINING in real applications

2 - 4 September 2019

Course Outline and Content

The course is aimed to provide hands-on experience in laboratory and in-situ testing of soils and rock mass related to geological disposal. The program of the three days training is conceived to progress from laboratory to the real scale tests in the Underground facility Josef. The content utilize long term experience with real geotechnical experiments and applications. It includes tests in a laboratory and in-situ with real tools and equipments, data collection and evaluation of results.

The course is made of the following units:

- **Unit 1:** Geotechnical testing of soils (bentonite as a buffer & backfill)
  - Geotechnical laboratory tests on soils
  - Installation of bentonite seal by spraying and sampling and evaluation of bentonite seal

- **Unit 2:** In-situ testing of the rock mass
  - In-situ tests on water (gas) permeability of the rock mass
## Requested Background
The learner is assumed to have basic knowledge of soil and rock mechanics. More in course details.

### Course Fee and Application
- no fee to Annette participants
- In order to apply for this course, please enroll at the ANNETTE application page
- Maximal number of attendees: 8

### Method of Delivery:
hands-on training in laboratory and underground

### Trainers:
- Radek Vasicek (course leader, radek.vasicek@fsv.cvut.cz), Jiri Svoboda, Jiri Stastka (all CTU, the Josef facility)

### Place of Delivery:
The Josef Underground Laboratory (map); Smilovice 93, 262 03 Chotilsko; Czech Republic

### Accommodation and Transport:
Self organised and self paid by the attendees; for more information and advice please contact our administrative contact

<table>
<thead>
<tr>
<th>Administrative Contact: Dana Pacovska - <a href="mailto:pacovska@fsv.cvut.cz">pacovska@fsv.cvut.cz</a></th>
</tr>
</thead>
</table>

### Date of Delivery:
2 - 4 September 2019

### Organised by:
Centre of Experimental Geotechnics, Faculty of Civil Engineering, Czech Technical University in Prague, Thakurova 7, 166 29 Prague 6, Czech Republic

### MASSIVE OPEN ONLINE COURSE ON NUCLEAR SAFETY CULTURE

**By TECNATOM and UNED**

**October 1st, 2019**

---

### MOOC (Massive Open Online Course):

**Introducing safety culture and its application to the nuclear field**

A completely online, free, international course. General information about the MOOC is available in the link above.

30 h of participant work - 1 ECTS

Divided in 4 independent NOOCs (Nano Open Online Courses):

- NOOC I. What is safety culture?
- NOOC II. Understanding Nuclear Safety Culture
- NOOC III. Developing leadership for safety
- NOOC IV. Refreshing Nuclear Basics

Open now the free registration, by clicking on each NOOC above.

We are actually in the production process. The course has been delayed and the starting has been postponed to October 1st, 2019. The course will be active during three weeks.

If you want to receive information about the MOOC/NOOCs, please fill the form [here](#).

We highly thank those advertising this initiative within the nuclear sector, but as well towards professionals from other industries (specially high-risk industries), as well as master students of nuclear and other technical studies, to gather a varied audience to enhance global networking and a collaborative learning experience. This course will allow a research study and its dissemination is crucial to achieve massive participation from the main target groups.

---

### Regulation and its Application in Nuclear Projects

**Framatome (Karlstein, close to Frankfurt), Germany**

**September 9th and 10th, 2019**

---

### Course Outline

The course is directed towards engineers that are employed by the ITER Organization, Fusion for Energy, or their sub-contractors in the ITER project (down to the lowest level, i.e. in the supply chain), or in any other supply chain company active in fission new build projects. Preferably they should be active in ITER (or any other fission/fusion new build) related design, procurement, manufacturing, construction, assembly, and commissioning of ITER (or fission/fusion new build) equipment.

The course will impart specific knowledge on nuclear licensing and the impact of licensing requirements on the design as well as on subsequent down-stream activities. Furthermore, it will be complemented by additionally training the skills that are necessary in the nuclear environment of a fission or fusion project like ITER.

### Course Content

The training contains the following:

1. Introduction to and overview of national / international nuclear law(s) and related regulation, involved national and international organizations (e.g. ASN, IAEA),
2. Main licensing activities / deliverables / responsibilities,
3. Overview of Codes and Standards (C&S) and introduction to relevant C&S, their impact on regulation or licensing,
4. Introduction to and overview of nuclear risks, safety objectives, and derived requirements,
5. Basic safety principles: management / technology / process oriented (e.g. defense in depth),
6. Introduction to (deterministic and probabilistic) safety analysis and related tools used by different technical disciplines for simulations in support of licensing,
7. How to integrate nuclear regulation requirements into fusion projects, and perform requirements management,
8. How to apply nuclear regulation requirements in design/manufacturing/construction/assembly/commissioning activities.

REQUESTED BACKGROUND
The targeted trainees should have undergone a suitable technical engineering education, preferably in a technical subject matter important for their actual job position. They shall be able to understand the basic design of a power plant and its systems and components, and the technical basics (physics/chemistry resp. design/operation) of a nuclear (fission or fusion) reactor.

STILL COLLECTING APPLICATIONS FOR FPS@KIT SCHOOL

COURSES OFFERED BY THE FRAMATOME PROFESSIONAL SCHOOL (FPS) AT KIT FOR ANNETTE
- Reactor Exercises (20-25 July 2019)
- Design of Pipelines against Earthquake Loads (on demand)

AN EXTENDED OFFER BY FPS@KIT FOR ANNETTE (TENS OF PLACES)
- Reactor physics calculations with deterministic methods (link);
- Beyond-design accidents, core-melt accidents (link);
- Thermohydraulic Stability Analysis (link);
- Radiolytic Gas Management in Boiling Water Reactors (link);
- Stress Analysis (link);
- Light Water Reactor (LWR) core design and fuel management (link);
- Light Water Reactor (LWR) core feedback and transient response (link).

Hands on OpenFOAM CFD simulations for heat and mass transfer in industrial processes.
By Technical University of Catalonia(UPC) Barcelona (Spain)
September 16th to 20th, 2019

Course Description
The course objective is to prepare the assistants to bring to practical cases the best practices and guidelines on Computational Fluid Dynamics (simulations) Best practices and guidelines are derived from the CFD fundamentals The required theoretical background will be provided Along the course, the case method is used to introduce the CFD fundamentals and approaches The cases will be related to nuclear technology but the concepts are valid in any other technical field The covered topics are

Topics covered
1) Diffusive heat transfer: Introduction to CFD, boundary conditions, the Finite Volume method for diffusion problems
2) Hydrodynamics and turbulence: The conservative laws of fluid motion, the Finite Volume method for advection diffusion problems, algorithms for pressure velocity coupling
3) Thermal hydraulics diffusive convective heat transfer: CFD strategies for temperature velocity coupling, finite Volume method for unsteady flows

After the introduction to each case, its fundamentals, modelling and case set up, the instructors will provide indications on how to proceed with the computer simulations. Attendees will have time to perform the simulations on their own. Eventually, common conclusions will be shared and best practices and guidelines for successful simulations will be retrieved.

### REMINDERS

**Principles of Radiation Protection. International Framework. Regulatory Control**  
(e-learning)

**SINGLE AND TWO-PHASE THERMAL-HYDRAULICS - for nuclear applications**  
(e-learning)

**ELINDER COURSE 'Decommissioning licensing and environmental impact assessment'**

---

**Lecturers:**
- Mrs. Gabriela Rosca-Fartat
- Mr. Gabriel Stanescu, PhD

“Horia Hulubei” National Institute for Physics and Nuclear Engineering (IFIN – HH)  
Nuclear Training Centre  
30 Reactorului, RO-077125, Bucharest-Magurele, Romania

**Method of Delivery:** Asynchronous e-learning.

**Final Examination:** multiple-choice test

In order to apply for this course, please use the application form on the ENEN website:

[ANNETTE application page](https://www.anette.ceu.edu/en/activities)

---

**SINGLE AND TWO-PHASE THERMAL-HYDRAULICS**

The theoretical lectures and exercise material are already posted. Videos fully available.

**INFORMATION ON INDEPENDENT EUROPEAN E&T INITIATIVES**

In the framework of the European ELINDER project, the SCK•CEN Academy for Nuclear Science and Technology organizes a specialisation training course in decommissioning 'Decommissioning licensing and environmental impact assessment'  

21-25 October, 2019  
SCK•CEN Lakehouse in Mol, Belgium.

**Objective**

Activities related to the decommissioning of nuclear installations significantly differ from those performed during the operational period. The various actors (managers, engineers, technicians, health physicists, regulatory bodies, etc.) are faced with specific issues such as changing environments, numerous “one shot” operations, the production of huge amounts of waste, discrepancies between original design and the final layout of the facility, etc.
The regulatory requirements and associated licensing procedure necessitate a good preparation for the dismantling strategy, safety assessment, risk management and environmental impact assessment. With the many questions emerging when a decommissioning project has to be set up, it is of utmost importance that the involvement of the stakeholders addresses the concerns of society. The main objective of this training course is to provide the participants with the basic requirements regarding the licensing and environmental impact assessment of a decommissioning project and to share experience from ongoing decommissioning projects. Visit the SCK•CEN Academy website for a [detailed programme](#).

**Target audience**

All stakeholders such as regulators, plant managers and operators, health physicists, technical service organisations should take benefit from this event.

**Registration**

Online registration is mandatory for all participants via the [SCK•CEN Academy website](#). The registration deadline is [October 2, 2019](#). Prices are available on the [website of the ELINDER training course](#).
